

ARTHUR FLURY AG

The company

Our expertise

Site

Arthur Flury AG is an internationally active Swiss company and a leader in the development and production of electro – technical connecting material. Arthur Flury AG has grown from a simple craftsman's business into a modern and dynamic industrial trading company, which today employs over 100 members of staff at its headquarters in Deitingen.

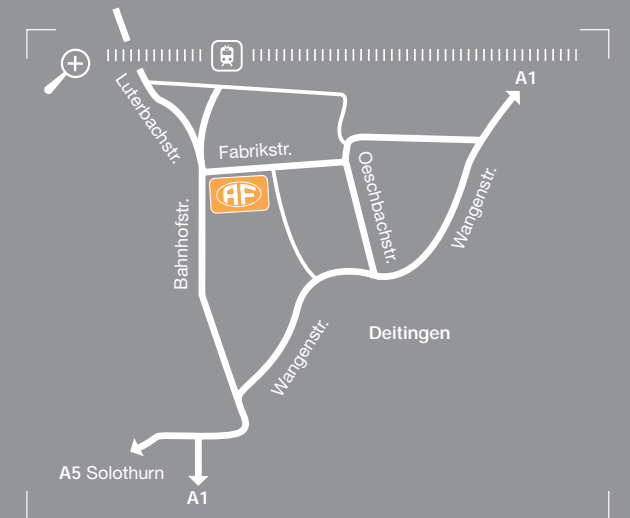

Our products meet the highest requirements in railway technology and power distribution technology as well as lightning protection and grounding systems for buildings.

Thanks to the well-developed distribution network and 26 offices around the world, we are your premier partner for all aspects of electrical connection technology.

With years of experience, modern manufacturing and a contemporary Quality Management System, we can assure the highest quality products and services.

With years of experience, wide ranging application know-how and consistent focus on electro-technical connection material, we are able to work closely with our customers and can adapt our products to individual customer requirements. Our specialist and advanced production engineering techniques of cold forming, stamping and chip removal of copper alloys are the decisive factors in our ability to produce light, stable and conductive components to international Quality Standards.

The overheadline material of Arthur Flury AG is in use in over 40 countries. Tram-, Metro and suburban trains of the largest cities in the world, as well as regional and national railway organisations, rely on the quality of our products and services.

A connection ahead

In Switzerland, Arthur Flury AG contributes significantly to the development of earthing and lightning protection building techniques and the leading plumbing and electrical companies have been among our major customers for many years.

The new and further development of proprietary products by Arthur Flury AG has always been a high priority and is an important part of the company's philosophy. A modern 3D CAD system provides our engineers with support in developing new products to meet individual customer requirements.

The aim of our intensive research and development work is to be able to offer our customers reliable and economical products that are the state of art.

The innovation is a major factor in our global success. So we developed, for example, in interdisciplinary research projects (electro-technics, mechanics, material science) components for overhead lines, which satisfy the current requirements of modern high-speed trains.

Arthur Flury AG has advanced, high-performance machinery at its disposal, comprising punching presses of up to 300 tons, CNC machining units, CNC automatic lathes and various special machines for finishing operations.

The integrated production planning system guarantees flexible and efficient production control.

In use, our products are often exposed to extreme use. Therefore, all products are tested during manufacturing and before delivery to the most modern methods. In long-term test, the required reliability and resilience are demonstrated.

We see ourselves not only as producer but as a holistic solution provider. Therefore, we perform in all disciplines and provide practice-oriented training programs for engineers and skilled workers. Even to our international customers, we offer comprehensive advice, on site training and technical assistance for the successful installation of our equipment.

Besides the quality of our products, a perfect delivery is one of the key success factors. With our high-bay warehouse, we ensure a very high service level and a rational commissioning of the complete product range and our goods. About 90% of the products are solely developed and manufactured by Arthur Flury AG.

Railway Technology

Products from a single source for the modern contact line construction

Through years of development, Arthur Flury AG has created products and accessories in light construction method that are adjusted to the increasing mobility requirements for the optimal operation of trolley, tram and normal railways as well as the era of high-speed trains. Thanks to the broad know-how and modular series, each train will be offered the best solution.

Earthing and lightning protection

The leading system provider
The earthing and lightning protection system of Arthur Flury AG covers all system components for the holistic protection of persons, buildings and electrical infrastructure.

The products meet the state of the art at the highest level. Thus, for example lightning protection components for lightning surge currents up to 100 kA (10/350; class H) and the foundation earthing components tested for short circuit current.

Power distribution technology

Reliable connections, tools and safety equipment for the energy sector

The production of connecting material for low and medium voltage networks is at the heart of Arthur Flury AG and goes back to the founding years.

Today, the power distribution technology covers a wide range of products. Tools, short-circuit indicators and voltage indicators from leading European manufacturers complement the range. This includes services such as maintenance service and periodic security checks.
